PATENT & TRADEMARK OFFICE

Application No.: 10/685,575

AMENDMENTS TO THE SPECIFICATION:

Please replace the paragraph beginning with line 6 on page 3 with the following:

--Referring to FIGS. 1, 2 and 3, which show one embodiment of the present invention installed below a chair cushion seat, and described hereinafter. A buffer 1 is assembled from structural elements comprising a central shaft 11, a torsion spring 12, a cylinder which defined a buffer chamber 13, a reposition spring 14 and a spring collar 15, wherein the torsion spring 12 is configured on the outer edge of the central shaft 11. The central shaft 11 and the torsion spring 12 are together disposed in the buffer chamber 13. A fixing mount 131 of one end of the buffer chamber 13 is enabled to bolt to a chair-back using a screw bolt, securely fixing thereof. Another end of the buffer chamber 13 is connected to the reposition spring 14, and another end of the reposition spring 14 engages with the spring collar 15. Securing lugs 151 of one end of the spring collar 15 bonds to a chair cushion frame thereof. The present invention is characterized in having: --.
